

CS471 – Web Technologies (Laboratory)		Lab 10
		Django Forms (Part 1)

This lab session covers Django Forms (Part 1 – Create, read (display or list), update, and delete). By the end of this session, students should have a very good understanding of how to build CRUD operations in Django.

Pre-lab Preparation:

1. The table book as in lab7.
2. The fake data from mockaroo.com website or any other methods.

Lab Activities:

Part 1: CRUD operations and Template organization (without using Django forms)

Task 1: Create a URL '/books/lab9_part1/listbooks' with any necessary HTML file and view function to list books and provide a link to add a new book (implemented in the following task (Task 2)). Also, two buttons/links are associated with each book that hold the book's ID to edit or delete the book (implemented in Task 3 and Task 4).

We Are Young: We Are Strong [Edit](#) [Delete](#)

Queen and I, The (Drottningen och jag) [Edit](#) [Delete](#)

Task 2: Create a URL '/books/lab9_part1/addbook' with any necessary HTML file and view function to insert the data of a new book.

Add New Book

Title

Author

Price

Edition

47	reema	50.0	4	20
----	-------	------	---	----

Task 3: Create a URL '/books/lab9_part1/editbook/<id>' with any necessary HTML file and view function to update the data of the selected book.

Edit Book

Title Author Price Edition

reema	50.0	1	202
-------	------	---	-----

Task 4: Create a URL '/books/lab9_part1/deletebook/<id>' with a view function to delete the book with the specified id.

```
def delete_book(request, id):  
    book = Book.objects.get(id=id)  
  
    book.delete()  
  
    return redirect('list_books')
```

----	-----------------	-------	-------	---------------

Part 2: CRUD operations with validation (using Django forms)

Task 1: Reimplement all tasks in Part 1 using Django forms with URLs starting as '/books/lab9_part2/...'

```
db.sqlite3 views.py M add_book2.html U forms.py U X
apps > bookmodule > forms.py > BookForm > Meta
1 from django import forms
2 from .models import Book
3
4
5 class BookForm(forms.ModelForm):
6
7     class Meta:
8
9         model = Book
10
11         fields = ['title', 'author', 'price', 'edition']
```

Add Book Using Django Form
